

Where *Tech* meets *One Health*

You are Invited! What if every person in Arizona could report a health threat in real time — and get actionable guidance before it spreads? That's the future being built this at this event.

EpiHack Arizona — a five-day innovation sprint hosted by the Ending Pandemics Academy at the University of Arizona — brings together technologists, epidemiologists, and One Health experts to co-create **community-based surveillance tools** from the ground up.

We'd love for you to join us for this **INVITATION ONLY Demo-Day event** where teams will present the working prototypes they've designed over the past five days — tools that could fundamentally change how Arizona detects and responds to emerging health threats.

Connect, learn and inspire. Come see what's possible when technology meets community health.

Friday, May 22, 2026

Doors open at 2.30pm, Demo at 3:00pm followed by reception

**Andrew Weil Center for Integrative Medicine,
1502 E Mabel St University of Arizona, Tucson**

Space is limited.
